

Defuelling Unit

Can work as a separate unit with defueling tank or as a part of a bigger system

Imenco's Defueling Stations are designed and manufactured to defuel helicopters at the recommended flow rate for each helicopter. Upstream defuel pump there will be a filter vessel and instrumentation.

Defueling unit can work as a separate unit with defueling tank or as a part of a bigger system. Stations are skid based and with an enclosure with roller shutter door for easy access during operation and maintenance.
