

# Hydraulic Emergency Stop Valve

It is a panel-mounted valve for operating emergency stop systems for hydraulic machines

Using this valve on your equipment will ensure safe operations. Our engineering department has developed a hydraulic valve to be used as an emergency stop button for hydraulic plants and machinery. This valve is easy to integrate to a hydraulic system and is mounted on a panel or a plate. Due to strict requirements for safety and CE marking, this has become a standard component of both our own and our customers' products.

# Hydraulic Emergency Stop Valve

Dimensions in mm. MO101553, MO101544

## Advantages

- Closing of hydraulic supply by piloting a master valve
- Drainage of pilot lines

## Technical Information

- Working pressure: 210 bar
- Flow: 10 L/min
- For mineral oil
- Push for activation and pull for deactivation
- For marine purpose
